

## Product Features

The Camberwell is a traditional copper lantern widely used in the late 1800's. It has clear lower and opal upper glazing which provides a degree of upward light to softly illuminate building fascias. The lantern is hand crafted from copper; its decorative finial and tower set make it unique to Sugg Lighting.

### Features

The Camberwell is available in a variety of combinations and can be supplied with a door or a hinged lid for relamping. The lantern is frog mounted as standard designed to fit a 76mm spigot.

### Control Gear

All gear is class I wired and a full range of discharge gear can be accommodated integrally within the lantern. The Sugg twin beam optic can be fitted offering a superior lighting performance; this lantern will also take a glass refractor. Single and two part electronic photocells are available as standard and should be factory fitted to maintain IP integrity.

## Options

### Mounting Options

Frog mounted, galvanised steel, powder coated, black polyester for 76mm and 89mm shafts. The frog is also suitable for wall or column bracket mounting and a cradle and frame suspension are available.

## Typical Specification
